

TCAM

(PC Based Security System)

This is webcam based surveillance system for home or business. It provides real time Video Monitoring and Motion Detection, if you put your computer to work watching over your home or business while you are there or away. The software detects and captures anything which moves in front of camera. It gives alarm notifications via email to your cell phone or activates a sound alarm. It can review the captured video files at your desk or anywhere in the world over the Internet. The system can also be able to scan multiple cameras locally or remotely. And if that is not enough be able to Remotely View Live Video and Audio of your home or business from anywhere over the Internet, just to be sure. Take remote control of your Surveillance Webcam over the Internet, changing the video or alarm settings. Check program variables and vital capture statistics. Even restart the program, all protected by a remote log on password.
